

Sister HL-2030 — halftone calibration

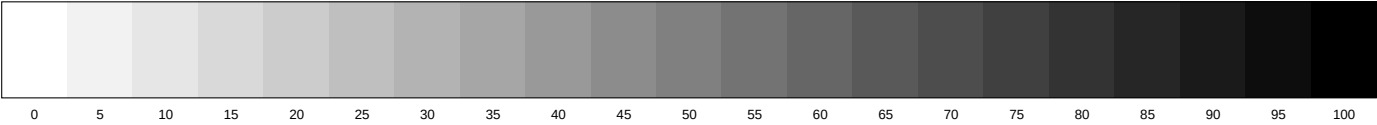

driver 0.9.1+fe3e4af pencil 58.4 um / density 1.0 newspaper 0.0 um / density 1.0
Print at 100 % scale with scale-to-fit OFF. Page 1 of 2.

Quality: ☐ Draft ☐ Normal ☐ High Style: ☐ Pencil ☐ Newspaper

Date _____ Paper / toner _____

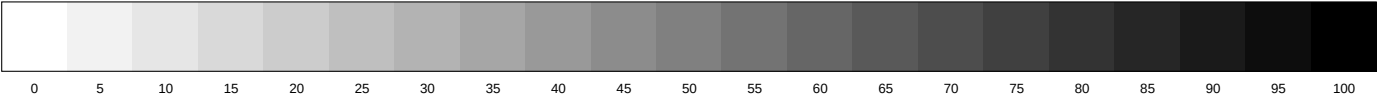

1 Grey step wedge, DeviceGray — 0 to 100 % in 5 % steps

The reference wedge. Numbers below each patch are the requested coverage.

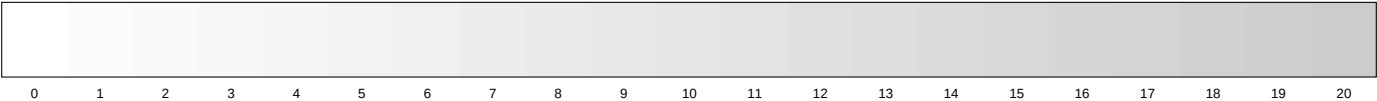

2 The same wedge as neutral DeviceRGB

Should match block 1 exactly. A difference means the colour path, not the halftone.

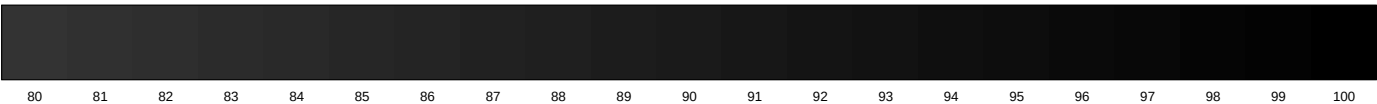

3 Highlight wedge — 0 to 20 % in 1 % steps

Where the first dots survive. This is the most sensitive test of the erosion constant.

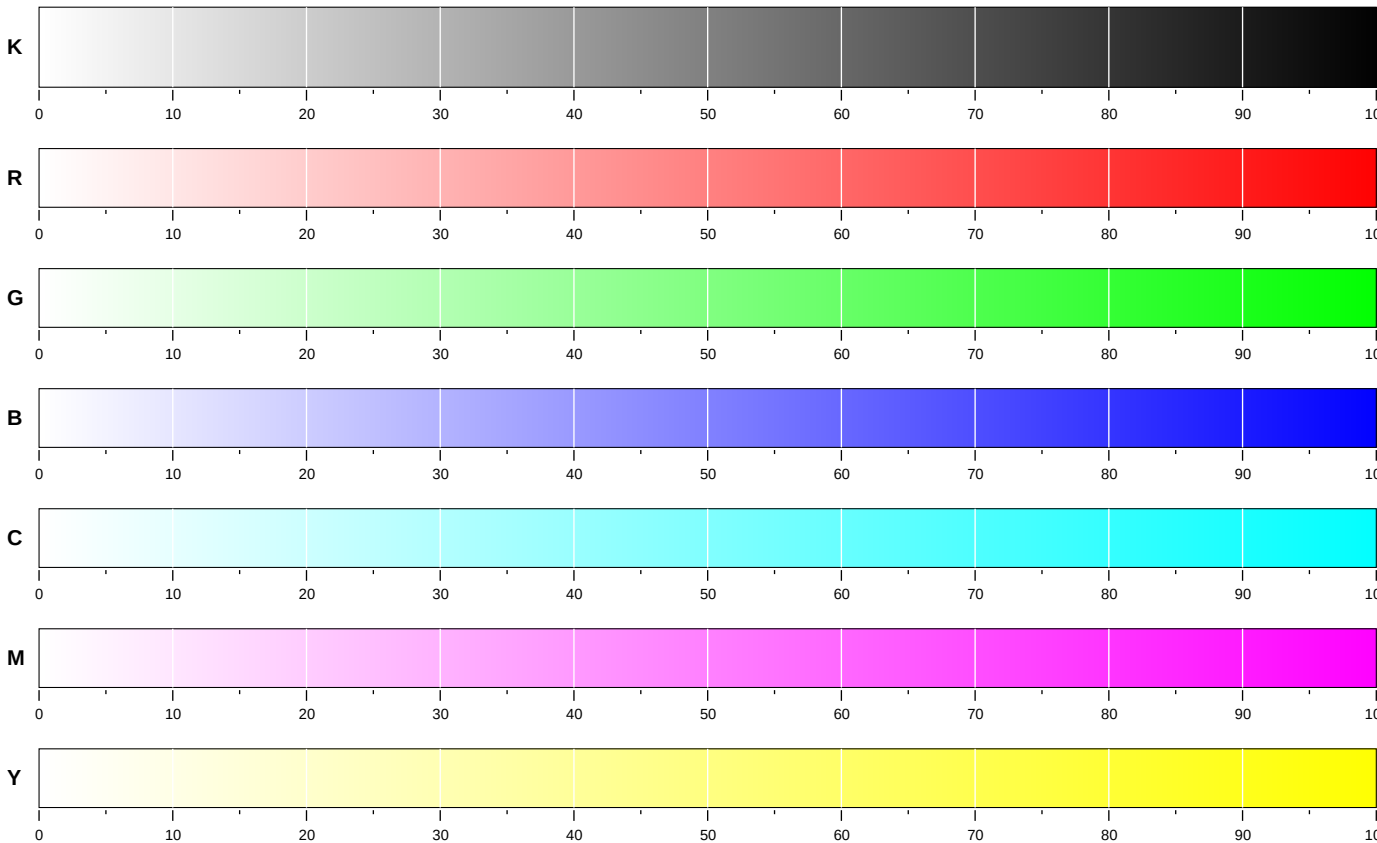

4 Shadow wedge — 80 to 100 % in 1 % steps

Where the last white holes close up.

5 Continuous ramps with a printed scale

White index lines mark every 10 %; ticks below mark every 5 %. A mono printer renders the colour ramps by luma, so each reaches a different final grey.

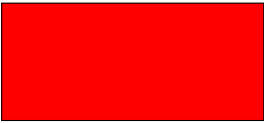

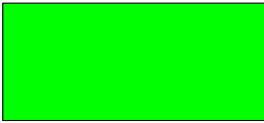

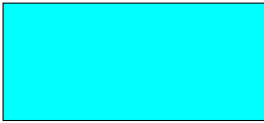

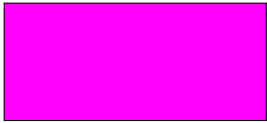

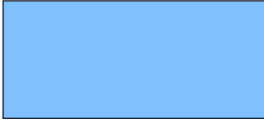

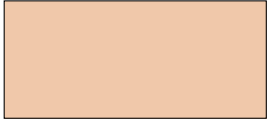

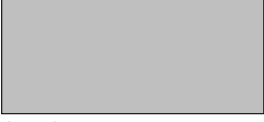

Sister HL-2030 — halftone calibration

Page 2 of 2. Same print run as page 1.

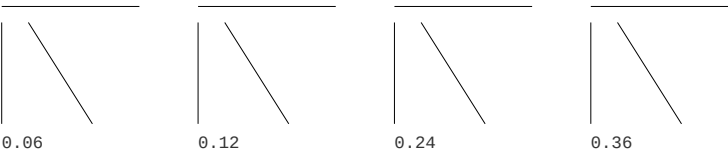

6 Colour swatches

macOS reduces colour to grey by luminance before the driver sees it, so these are a record of what the printer does, not something the driver can adjust. Report any pair that comes out as the same grey.

				
Red 255/0/0	Green 0/255/0	Blue 0/0/255	Cyan 0/255/255	Magenta 255/0/255

Converging rules — mark where they merge

0 25 50 75 100

8 What did you see?

- First wedge patch clearly darker than bare paper (block 1) _____
- First wedge patch that matches the 100 % patch (block 1) _____
- Patch that reads as a true mid-grey, halfway paper to solid _____
- First visible patch on the highlight wedge (block 3) _____
- First patch matching 100 % on the shadow wedge (block 4) _____
- Percentage where each block 5 ramp stops changing (K/R/G/B/C/M/Y) _____

Overall: ☐ too light ☐ about right ☐ too dark

Solids: ☐ grey or patchy ☐ even and solid

Texture: ☐ too coarse ☐ about right ☐ too fine

Notes _____
